PROFILE

Interdisciplinary Design Engineer specialized in Human-Computer Interaction, inclusive design, and immersive environments. My work integrates health-centered design, cognitive ergonomics, and spatial experience to develop interactive systems that support emotional well-being, accessibility, and attention in educational and therapeutic contexts.

RESEARCH METHODS & DESIGN APPROACH

- Heuristic Evaluation
- Interaction Analysis
- Task Flow Analysis
- Usability Testing (Task Completion Rate)
- Pre/Post Evaluation
- Survey-Based Evaluation
- Semi-Structured Interviews
- Contextual Inquiry
- Observational Studies
- Thematic Analysis
- Human-Centered Design (UCD)
- Participatory Design
- Co-Design
- Design Thinking
- Iterative Prototyping
- Experience Prototyping
- User Journey Mapping
- Persona Development
- Empathy Mapping

TECHNICAL TOOLS

- Figma
- Adobe Illustrator
- Adobe Photoshop
- AutoCAD
- SolidWorks
- SketchUp
- Unity

EDUCATION

- Master’s Degree in Interactive Media (HCI Specialization)**
Universidad Tecnológica de la Mixteca 2024 – 2026 (Expected)

Thesis: Design and Implementation of an Immersive Environment to Improve Attention in University Students
Focus: immersive systems (VR/MR), cognitive load theory, distraction management, usability evaluation.
- Bachelor’s Degree in Design Engineering**
Universidad Tecnológica de la Mixteca 2018 – 2023
Undergraduate Thesis:
Design of a Multifunctional Device for Personal Hygiene Support for Women with Grade 3 Rheumatoid Arthritis
Focus: inclusive design, ergonomics, assistive product development, user-centered methodology.

AWARDS & RECOGNITION

- Finalist – HCI International 2025 Student Design Competition (Sweden)**
Tíku: Emotional Technology for Rethinking Men’s Role in Society
Human-centered design project addressing emotional literacy among young men in culturally sensitive contexts.
Developed a mobile application paired with smart wristbands integrating biofeedback and gamified emotional tracking.
- First Place – MEXHCI National HCI Student Competition (Mexico, 2023)**
Published Research Contribution
Soriano Martínez, N. Del Castillo Lale, D., Espinosa Ortiz L. & Juárez Santiago, A. (2023). Lucero: Therapeutic Device for Child Support and Monitoring During Parental Separation.
DOI: <https://doi.org/10.47756/aihc.y9i1.188>
Keywords: Child Psychology, Grief Therapy, Parental Separation, Design Thinking, Usability.

RESEARCH INTEREST

- Human-Computer Interaction (HCI)
- Design for Health & Emotional Well-being
- Immersive & Spatial Interaction (VR/MR/XR)
- Cognitive Ergonomics & Attention
- Participatory & Inclusive Design

LANGUAGES

- Spanish - Native
